COMING TO AMERICA

The United States is often referred to as a nation of immigrants—and new government data prove it. Who is coming to this country today, and where are they coming from? **BY PATRICIA SMITH**

Look around your school: How many people do you know who were born in another country or whose parents were?

Chances are it's quite a few. New data from the **U.S. Census Bureau** show that one in five United States residents is an immigrant (someone who was born in one country but moved to another) or the young child of an immigrant. Immigrants now make up 13.7 percent of the

U.S. population—the largest share in more than 100 years.

The data also show that the mix of people moving here is changing. In the early 2000s, the majority of immigrants came from Latin America. Today, Asians make up the biggest group of newcomers.

"We think of immigrants as being . . . from Latin America, but for recent arrivals, that's much less the case," says William Frey, who

analyzed the new information.

However, among *all* immigrants living in the U.S., not just new ones, Latin Americans still comprise the largest group (*see chart, next page*).

The census findings come at a time when immigration has become a heated topic among Americans. President Donald Trump and some lawmakers have voiced criticism about immigration. Trump has restricted the number and type of

people coming into the U.S.

But other lawmakers say immigration is important to the nation's well-being. They argue that immigrants contribute greatly to our culture and economy.

Regardless of the debate, experts say the U.S. foreign-born population will continue to rise in coming years. The Pew Research Center estimates that by 2025, immigrants will make up more than 15 percent of the population—the highest level ever.

Shifting Laws

The last historical peak in U.S. immigration came in 1910, when large numbers of Europeans were fleeing poverty and violence in their home countries, including Germany, Italy, and Poland. But in the 1920s, Congress imposed **quotas** that sharply reduced the number of immigrants and gave preference to Northern Europeans.

In 1965, a new law did away with the quotas and changed the nation's immigrant population. Congress aimed to treat people from all countries equally and encourage the arrival of skilled, educated workers. Officials also wanted to make it easier for immigrants to bring their family members here. The changes led to a new wave of immigration from Latin America and Asia.

A Changing Population

For many years, more immigrants came to the U.S. from Mexico than any other country. But as Mexico's economy has grown in recent decades, life improved for many of its citizens. Since 2010, the number of Mexican immigrants coming to this country has declined.

At the same time, the number of Chinese and Indian immigrants has

surged. Both countries have large numbers of educated professionals who have been attracted by growing job opportunities in the U.S., according to Frey.

The data also reveal that today more immigrants are college-educated than in previous years. About 45 percent of newcomers have university degrees—compared with just 30 percent of people who were born in the U.S.

New Destinations

The Census Bureau data highlight further shifts: Recent immigrants are settling in parts of the country where immigrant populations have typically been low. For example, North Dakota is the state with the biggest increase in foreign-born residents (*see chart, bottom right*). The number of immigrants living there in 2017 is almost double what it was in 2010. In recent years, North Dakota has taken in **refugees** from countries such as Iraq and Somalia.

The fact that immigrants are moving to places they haven't traditionally gone could be a reason for some Americans' fears about newcomers, says David Bier, an immigration expert at the Cato Institute in Washington, D.C. But it's also a reason to be hopeful.

"There's great evidence that when people are initially exposed to diversity . . . [they] react negatively," he says. "But . . . as Americans become more familiar with immigrants, they accept them." ♦
